Parachute Recovery Wadding Instructions

This material is used to protect your parachute or streamer from the heat of the engine's ejection charge. Parachute Recovery Wadding is flame resistant, thus eliminating the possibility of recovery system failure.

Preparation For Launch

For maximum efficiency use enough wadding to fill the rocket body tube for a distance of twice the body diameter. Usually 2 or 3 squares for 1" diameter tubes and 6 or 7 squares for 1-1/2" tubes. When preparing the rocket for flight crumple the wadding loosely to get the maximum bulk from it and still obtain a good seal against the wall of the tube. Pack the 'chute or streamer in over the wadding as shown in the illustration.

Crumple sheets lightly, insert wadding, making sure it completely touches body tube walls, then insert recovery system.

Froisser légèrement les feuilles. Introduire le rembourrage en s'assurant qu'il touche complèment le mur du tube de corps. Introduire ensuite le système de récupération.

Blätter leicht zerdrücken; die Watte so in das rumpfrohr stecken, daß die Blätter die Wände des Rohrs vollständig berühren, dann das Bergungssystem hineinschieben.
